BLUE CAMEL DESIGN & FIT-OUT LLC

Blue Camel Design LLC (BCD) is a fit-out Contracting and MEP company based in Dubai, UAE. Established in 2005, Blue Camel Design has been developed to serve the regional interior and fit-out needs for mainly Hospitality, Corporate, Retail, F&B and Residential projects throughout the Middle East.

INTRODUCTION

With over a decade of experience in the industry and prestigious projects and reputed clientele, we have a proven track record in delivering complex turnkey interior design projects on schedule with the highest quality products to the client's satisfaction.

We have a strong management team that works closely with our suppliers and our clients to ensure the best possible service thereby ensuring successful project completion.

As a locally- established company, we understand the demands of our clients and the complexities of delivering quality and innovative projects in both strict time frames and tight budgets. We are able to communicate this to our suppliers and hence are able to realize positive delivery schedules and budgetary compliance.

The biggest advantage for BCD in comparison to its competitors is the availability of different in-house facilities like MEP, joinery, internal glass, painting, metal fabrication, upholstery, etc., which allows us to effectively monitor and control the quality at every stage of a project life cycle, thereby, ensuring the client with the highest quality products.

The company's core capabilities in providing superior turnkey solutions is supported by the dynamic leadership, experienced architectural and MEP design and project management teams, highly experienced, skilled & dedicated people in designing to standards, obtaining statutory authorities approvals, carpentry, glass, painting and upholstery and fully supported by state of the art machinery and equipment to facilitate our highly skilled workforce.

Our work is our best testimonial, from hotels and retail showrooms to corporate offices, restaurants and residential units; we have undertaken a wide range of projects that vary in size and budget.

MISSION:

Our main objective is to provide our customers with best quality products and solutions with efficient service at affordable costs.

VALUES:

At BCD we have a high regard for the culture and values of the region we operate in. We believe in open communication and transparent partnerships with government authorities, investors, service providers, employees, suppliers, clients and other stakeholders.

We treat people with respect and encourage teamwork, continuously looking for improvements both as individuals and as a company. We offer continuous in-house and external training to our staff members for both their personal benefit and professional growth and have strict HR policies for a diverse multicultural workforce.

OUR FACTORY & MEP WORKSHOP

QA & QC POLICY

The Quality Control policy as described below is essential in meeting the requirements of BCD, Clients, applicable codes, specification and standards.

The management approves the content of this policy and recognizes its responsibilities to support and ensure compliance with policies, procedures and practices described herein. All the above is enhanced by our ISO certifications and the associated process and procedures.

SCOPE

This manual provides the requirements and guidelines for the establishment and execution of the Quality Control program for the performance of the work as performed by BCD. The Quality Control program is designed to provide quality control personnel with instructions, procedures, and guidelines for the implementation of the Quality Control and assurance program.

OBJECTIVE

The objective of the quality control program is to ensure that all works are performed in compliance with applicable standards, specifications, regulations, codes and good construction practices. Further, this program is designed to provide a completed installation that meets all standards for reliability, safety, and environmental protection.

ADMINISTRATION

The administration and implementation of the Quality Control/ Assurance program shall be the responsibility of the QA/QC co-coordinator. He will be located at the base serviced by specific quay site QA/QC officers. He will establish a satisfactory working relationship with the appointed client representative. There will be a good communication between QA/QC coordinator, client representative and project personnel as and when required.

Recognizing that the initial responsibility for performing quality work rests with the Production Manager, a special effort will be made to promote adequate training for them.

MATERIAL CONTROL

This program will be established by the implementation of the quality plan described in this manual. The detailed plan will assure compliance with design requirements and specifications.

INSPECTION

Inspection will be planned and performed to the extent necessary to verify that materials, equipment, items or services conform to applicable drawings, specification, codes, standard or other documented requirements.

PROCUREMENT CONTROL

Procurement will be performed in accordance with the applicable industry practice. Certificates of compliance, import/export duty, bill of lading, form M, shipping certificates, etc, when required will be prepared with copies transmitted to the client, as applicable.

PROCESS CONTROL

Inspection procedures will assure that processes affecting quality (e.g. shipping, clearing/forwarding, haulage, import, export, and other such processes as ICA may utilize) are controlled in accordance with specified requests.

CORRECTIVE ACTION

Conditions adverse to quality will be promptly investigated, evaluated and corrected. In the event of a significant finding adverse to quality, the cause will be determined, and corrective action taken will be reported to appropriate levels of management. Follow-up actions will be taken to verify implementation of corrective action.

NON-CONFORMANCE CONTROL

Items which do not conform to specified requirement will be controlled to ensure proper disposition and prevent inadequate use. Controls will provide for identifications, documentation, evaluation, segregation and disposition of non-conformances to affected organizations.

Subcontractors:

Subcontractors will be responsible for the Health and Safety of their own personnel through the provision of competent Supervision, training, and instruction as well as competent employees. They are also responsible for the provision of well-maintained plant and equipment, certificate of testing by a Third party (where required) and for competent Machine Operators.

Where required by UAE-HSE Legislation or contract to provide a trained First Aider and First Aid Room / Equipment. They are to maintain high levels of housekeeping and provide required PPE for the Safety of their workers.

All Personnel are accountable for not carrying out their Health and Safety responsibilities.

HSE Aims and Objectives

We have produced a number of HSE aims and objectives for the project that all involved in the Project must contribute towards achieving. They are as follows;

- To strive to maintain a sustainable HSE programme for all employees and sub-contractors.
- To ensure that our employees and those of our sub-contractors go home safe at the end of each working day.
- To provide a risk-free working environment through hazard analysis and production of method statement for safe systems of work.
- Communicating Occupational HSE information to all employees and subcontractors, through induction, toolbox talks, practical demonstrations, safety alerts and one to one discussion. Maintaining records of all information provided to others.
- Ensuring HSE requirements are integrated with our business systems.
- Zero Accidents

Progress against HSE objectives will be measured monthly by the Project Manager with a report published and shared with all parties.

Pre-Construction Project Kick-Off meetings

Prior to work commencing on each of the projects our HSEQ engineers will call a meeting with all the relevant parties to ensure that they are aware of the known hazards on the site and the Safety rules to be applied to the project, to gain an understanding of the Subcontractors mode of working and to ensure that everyone fully understands their responsibilities for Health Safety and Environment. Work will not commence on any worksite until all pre-construction documentation, including the Health and Safety Plan and Certificates from external authorities' have been received and approved by the Project Manager and that he authorizes the work to start.

Induction Training:

HSE Induction will be provided for all employees and subcontractors' employees including management personnel in English, Hindi or other languages by using pictures and interpreters to ensure that they are all aware of HSE requirements for the worksite. Training will be provided by Safety personnel under the guidance from the facility HSE Manager and will include a short test to demonstrate each person's understanding of information provided. The induction will include the following syllabus but not exclude other information as required at each session dependent on site activities.

The Induction Syllabus is as follows:

- Site HSE Rules
- Traffic Management
- Electricity: portable electric tools and power supplies
- Work permits: Electrical Work, working at a height, confined space, hot works etc.
- Working at Heights: Scaffolding Scaff Tags and Safety Harnesses
- First Aid / First Aid Kit
- Accident / Incident reporting and Investigations
- Emergency Response: Planning and Preparation
- Toolbox talks
- Heat Stress / Symptoms and actions to be taken
- Noise / Vibration from work equipment
- Manual Handling
- Housekeeping
- Training
- Temporary Power Tools
- Safety Award Scheme
- Safety Committees

Records of all attending each Induction session will be maintained by our HSEQ engineer. As new activities commence on the site that have their own control measures then the Induction Syllabus will be revised, and all personnel asked to attend the new course.

Projects HSE Rules

The Project Manager has signed off on a number of HSE Rules that are explained during Induction to all employees by the HSEQ Engineer. Each subcontractor must ensure that their employees comply with them to ensure their Safety and that of third parties.

Safety Award Schemes

We will support all other initiatives that increase the Safety Awareness of employees, including safety awards for all levels of personnel who through their acts and/or attitude demonstrate their commitment to working safely.

Contractors awarded work on this project will be expected to demonstrate their support in raising employee awareness and for appraising their personnel through site inspections, adhoc questions related to site Safety and Monitoring Safe System of works.

Personal Protective Equipment (PPE)

PPE will be provided to all personnel on the project dependent up on their needs as defined from Risk Assessment. All personnel working on the project works sites will have to wear a Safety Helmet, Safety Footwear, a high visibility vest and coveralls. Light eye protection and gloves suitable for the work activities must also be provided and worn, when required by risk assessments.

Specific PPE identified during risk assessment and prescribed on work permits etc. must be provided and personnel trained in its use, maintenance and inspection. Records of issues of PPE to be maintained by each issuer for audit purposes.

Electrical Safety

The use of Electrical Power on sites is the responsibility of each company including contractors. Power tool supplies to be reduced to 110Volts if possible using a step down transformer or be battery operated and only used by competent persons.

All power tools should be tested by an Electrician before use and tagged with the date of test. Each tool to be retested every 3 months and a register of all test results to be maintained for audit purposes.

Electrical distribution boards have to be an enclosed metal cabinet with a lockable door and the appropriate safety sign attached to the door. All external electrical connections to be provided with an industrial fitting that is weatherproof. Cable ties to be used to affix cabinets to posts.

Personnel using electrical power tools to inspect plug connections and cables before use to ensure that there are no bare wires or damaged connections, if any are found the equipment must not be used and damage reported to your supervisor. Electrical leads, plugs or equipment are not to be allowed to come in contact with water. Temporary electrical cables are to be elevated to above head height and tied off with cable ties to prevent accidents.

All tungsten and halogen lamps to be fitted with a glass guard to the element, such lamps shall be fixed at a high level.

When machines are used to make the excavation then they should be sufficient distance away from the edge of the excavation to ensure it will not collapse due to its weight plus that of the spoil from the excavation.

Personnel should not be allowed to work in a trench when a machine is working within the trench. All deep excavations should have suitable barriers and flashing lights in place warning personnel and drivers of the dangers approaching the trench or excavation.

Working at Heights

When working at heights is required for long durations and above 1 meter where a safe working platform is not provided then scaffolding will be erected by competent persons and the scaffolding inspected and tagged by an inspector. The scaffolding design is to incorporate full boarding, handrails and kick boards and an access ladder. Scaffolding materials to be of a sound construction and in good repair.

Personnel erecting scaffolding, once above the first level will be required to wear a full body safety harness and fall arrest equipment. Only persons trained in the inspection and wearing of such harnesses will be allowed to wear them.

The erection of scaffolding or use of edge protection devices will need to be approved by the Construction Manager and permits issued accordingly for the duration of the work.

First Aid at Work

We will ensure that there is at least one trained and assessed first aider on each of its worksites that they have been provided with a first aid kit of sufficient size to cover the number of persons on the site.

Accident / Incident Reporting and Investigation

All accidents and incidents no matter how minor must be reported to Blue Camel Design Project Manager and the HSEQ Engineer who should be involved in the investigation and the depth of report required. Investigations are to be carried out in a humane manner and not to apportion blame.

Major injuries or dangerous occurrences will be reported to the landlord as soon as possible within 24 hours.

Recommendations coming from an investigation will be reviewed by the Project Manager and the HSEQ Engineer before being implemented. Findings from Investigations will be shared with all employees and sub-contractors on site to create an overall awareness and to improve working methods and prevent a recurrence.

Emergency Response Planning and Control

A Project Emergency Plan will be developed to be implemented should an emergency occur, which will include a fire evacuation plan with notices displaying the position of Fire Alarm horns and the Musterpoints.

The emergency plan will include arrangements for dealing with a major injury, collapse of scaffolding, turnover of a crane, road traffic accident, explosion or collapse or flooding of an excavation and the rescue of personnel.

Once our plans have been developed and signed off we rehearse and drill on a regular basis with all contractors on our project. We recognize that emergency plans have to be regularly reviewed and that our plan will form part of the overall Project's Plan.

Drugs and Alcohol

As per our Policy any person arriving at work who is considered to be under the influence of either alcohol or drugs will be suspended until an investigation can be completed and the person is sent home.

Personnel Taking a course of prescribed drugs must inform their Supervisor who must assess any known side effects and establish whether the person is safe to continue with their normal duties.

Training

Training in Fire Fighting confines spaces, scaffolding, crane operations, riggers and first aiders will have to be provided by registered party training establishments, with records of competencies maintained on site for auditing purposes.

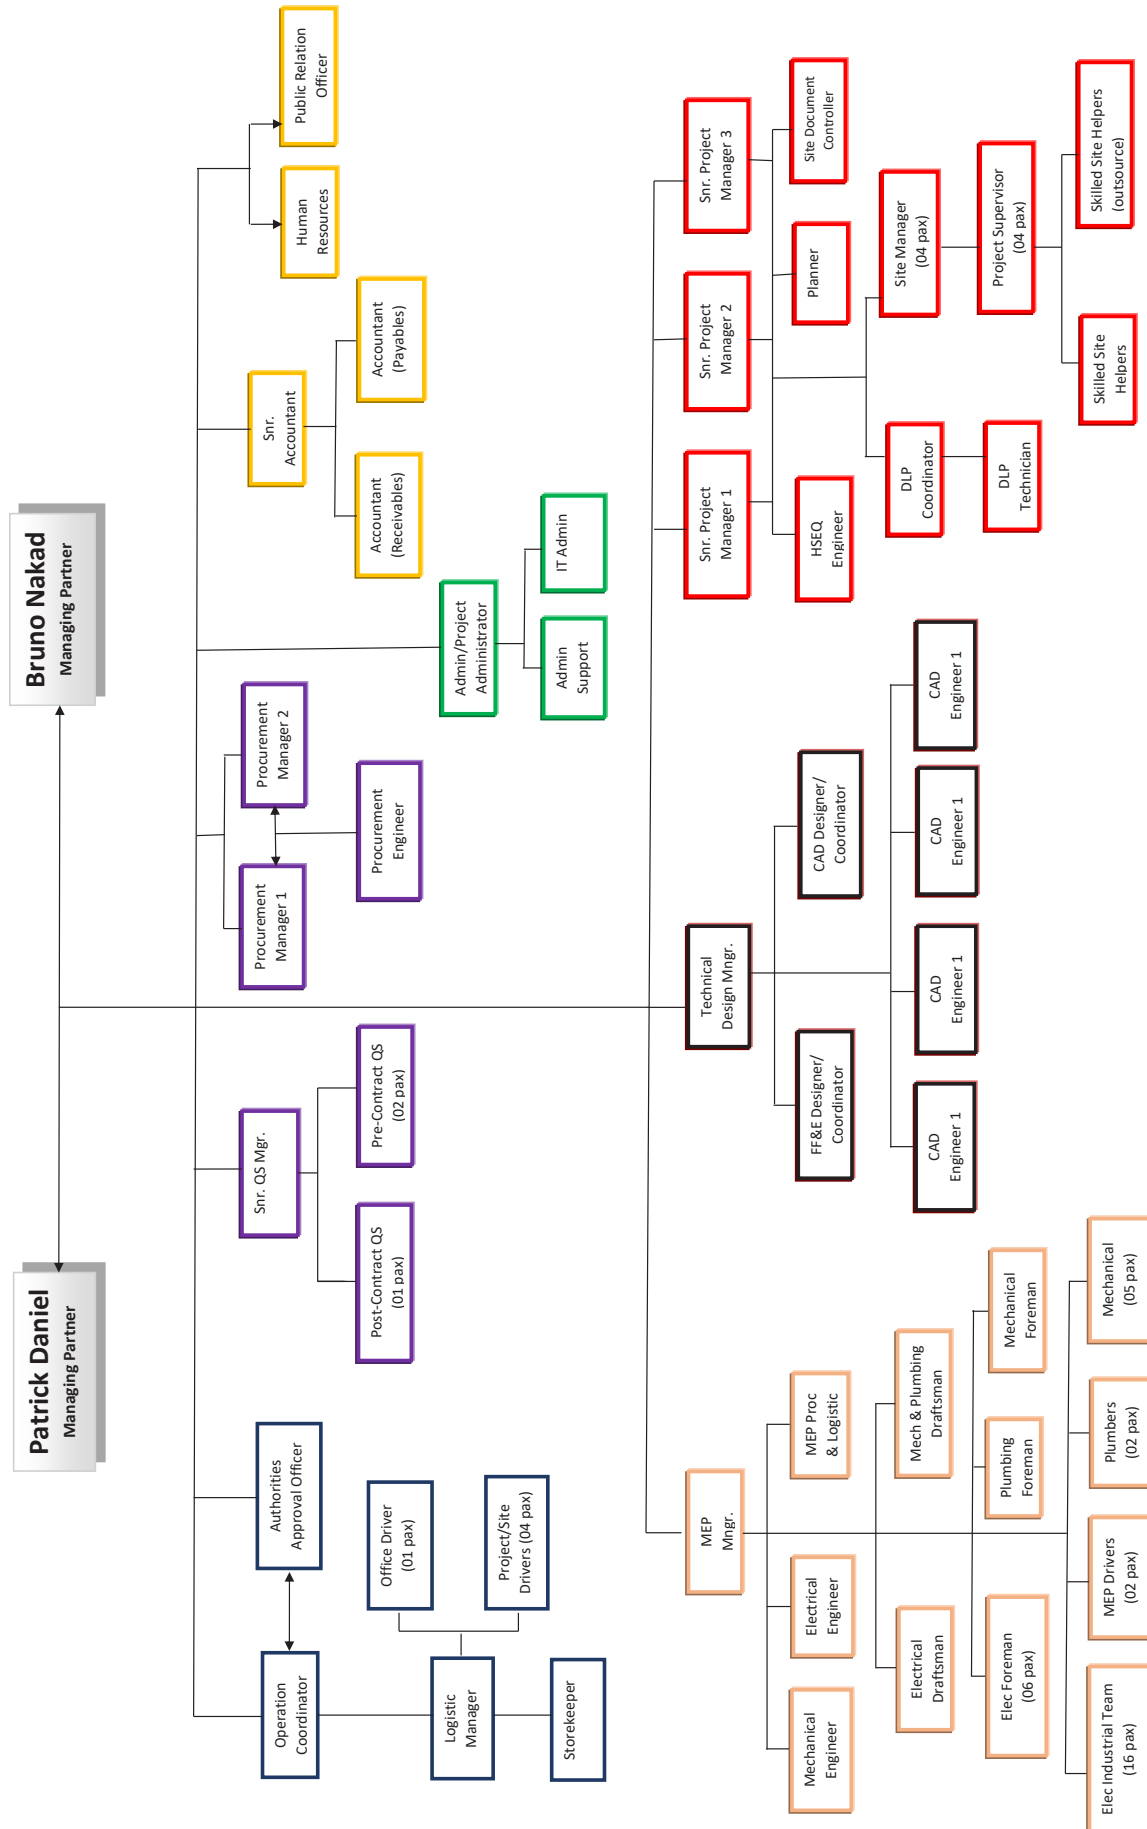

Security and Lighting

Each worksite must be provided with security personnel to ensure entry by vehicles and personnel is controlled and authorized. Each worksite must have 24 hours personnel assigned to security available, who are provided with telephones to liaise with the emergency services and persons named on emergency call out lists.

Site lighting shall be deployed as necessary when night working is necessary to provide adequate lighting to carry out work safely.
